

*Regardless of project size, the Professional Installers, Inc. culture is to treat every project as an opportunity to showcase exemplary business practices.*

Project Size:  
122 Haworth Workstations

### HIGHLIGHTS:

- Installed 122 new Haworth workstations.
- Construction delays earlier in the projects required constant communication and aggressive project management to ensure the client would meet their end of year deadline.

## ANDERS CPA

St. Louis, Missouri

### THE PROJECT

Anders CPA has seen energetic growth in business and business lines over the past decade. Having outgrown their existing office space, the partners decided it was time for a move into a new facility. This move would consist of utilizing new and used furniture to install 122 new Haworth workstations.

### THE APPROACH

Due to construction delays early in the project, last minute client changes and the client's desire to be in the new facility before the end of the year, it became immediately necessary for Professional Installers to take an aggressive approach to Project Management. Working closely with the Project Consultant, working on a condensed schedule, and working simultaneously around other trades and construction materials required constant communication and coordination to keep all of the different facets of the project moving ahead.

### THE WORK

- 122 New and Used Haworth workstations
- New and used work surfaces
- Installation of all storage components.
